WORK EXPERIENCE

Senior Software Engineer II **Confluent** *Control Plane - Metadata Storage*

June 2024 - Present

Vancouver, BC

- Developed and operated control plane metadata storage services across AWS, Azure, and GCP, providing cloud-agnostic CRUDL and Watch APIs that power critical Confluent Cloud operations.
- Led the design and implementation of multiple Distribution Service components, enabling products including Schema Registry and Kora to access cross-region metadata with in-region performance characteristics.
- Redesigned Azure List and Watch behavior on Cosmos DB, improving latency by 15x and reducing consumed capacity by 8x, with annual cost savings above \$400,000.
- Experimented with a durable cache backed by SlateDB to enable scalable reads, created open-source Go bindings, and contributed upstream.
- Led development of a SQLite-backed caching layer for scalable Watch snapshots and cloud-agnostic secondary indexes.

Software Development Engineer II **Amazon** *Marketplace Tax and Accounting Team*

September 2022 - June 2024

Vancouver, BC

- Developed and operated multiple microservices in Amazon Retail accounting and tax workflows, handling loads up to 2,000 TPS.
- Eliminated \$503MM in accounting errors by designing a generic seller-classification fix and deploying it globally across services and regions.
- Led extraction of a key component from another team's service into a standalone service, cutting development delays by roughly 80 percent while removing significant tech debt.
- Built an asynchronous verification path to validate new services before migration without affecting existing production performance.
- Developed a chatbot MVP with Amazon Lex that reduced turnaround from one to two weeks down to one day for half of customer-associate inquiries.

Software Development Engineer I/II **Amazon** *Alexa AI Dynamic Routing*

May 2020 - September 2022

Seattle, WA

- Developed and operated a highly available, low-latency service in the Alexa request path, serving up to 13,000 TPS and routing requests to partner services.
- Expanded rule-engine expressivity without degrading performance, giving partner teams more precise traffic-filtering controls and improving routing accuracy.
- Designed and developed instrumentation to verify correctness and measure performance during migration to a new ReactiveX-based architecture.

Full Stack / Quantitative Developer **Lucena (Neuravest) Research**

March 2019 - May 2020

Atlanta, GA

- Deployed a containerized integration with Interactive Brokers, enabling clients to move proprietary strategies into live trading.
- Designed market-beating strategies for multiple data providers using statistical and AI techniques to demonstrate the value of supplied data.
- Developed ETL pipelines for client datasets and public market data from Bloomberg and Refinitiv.
- Developed and operated the core backtesting framework and client-facing web application.

Software Developer Intern **Elavon, US Bank**

Summer 2018

Atlanta, GA

- Administered organization-wide DevOps tooling including Jenkins, TestRail, Jira, and BitBucket.
- Improved test coverage for the external-facing Commerce SDK.

Software Developer Intern **IBM Security**

Summer 2017

Atlanta, GA

- Developed a real-time interactive visualization application in Unity3D for threat and asset management with IBM QRadar SIEM.
- Built a VR application to help individuals with Autism Spectrum Disorder better understand facial and verbal cues; the project won IBM's national intern hackathon.

Teaching Assistant, Objects and Design **Georgia Tech**

2017 - 2018

Atlanta, GA

- Instructed students on object-oriented programming and software engineering practices including testing, project management, and debugging.
- Mentored teams through semester-long Android application projects.

Research Assistant, HCI **Georgia Tech**

2016 - 2017

Atlanta, GA

- Developed a Chrome extension and Android app to test and launch a novel password-creation and management strategy.
- Created instructional material for applying the strategy with the developed tools.

EDUCATION

B.Sc. Computer Science, Georgia Institute of Technology

2015 - 2018

Concentration in Intelligence and Information Internetworks

GPA: 3.82 / 4.0

TECHNOLOGIES AND LANGUAGES

Languages: Golang, Java, Python, Kotlin, JavaScript, Shell, Matlab

Technologies: Claude Code, AWS, Azure, GCP, Terraform, Kafka, SemaphoreCI, Spring, Guice, Git, Dask, SQL, Pandas, Airflow, Scikit-learn, React, Backbone.js, Docker, Kubernetes, Unity3D

Other: Data structures and algorithms, distributed systems, feature engineering
